

THREE COMMON PITFALLS OF MICROSOFT TEAMS GUEST ACCOUNTS

Impossible to know and control who, outside your company, has guest access to your MS Teams environment.

NO password complexity check, password expiration, or Two-Factor Authentication (2FA) enforcement.

Guest Accounts can NOT be revoked! Creating thousands of permanent back doors to your company's sensitive information.

Guest accounts do not work if the external organization has blocked their domains on Microsoft MS Teams.

Guest accounts are impossible to troubleshoot.

Microsoft only allows five guest accounts per paid Azure AD license. A company with 1,000 Microsoft licenses can only send out 5,000 guest account invitations.

There is no control or limitation on how many guest accounts invitations a user can send out.

**NextPlane
ConverseCloud
Interoperability and
Federation Services**

Acts as a universal federation and interoperability hub for Microsoft Teams users to add non-Microsoft Teams contacts, see presence status, exchange messages, send rich text and emoji reactions, and share files inside or outside of the enterprise.

Check out **#universalinteroperability** on Twitter to see how seamlessly it works.
